

Student outputs - ITALY

1) Video: Fridays for future

The students want to refute the statement contained in a tweet that wants to demonstrate through a photo how the Fridays for Future protesters left the streets full of waste at the end of their event, thus contradicting their commitment to a better world.

The students explain through a video the strategies used to unmask the fake news, mainly through an image search that reveals how the photo has been circulating on the web for a long time and is not connected to the Friday for Future event.
